Secure, reliable, high-speed JetPay® products and services provide clients with transaction processing systems that are cost-efficient and Faster than Cash®.

As fast as one, two, three, JetPay processes your payment transactions in just three seconds.

In today's business economy the need for efficient communication between data systems is essential to increase margin. Your payment system should not be an exception. Unlike our competitors, JetPay offers today's industry-standard communications.

Communicate with JetPay through standard XML interface using TCP/IP over a private line or the Internet without the need for a gateway.

NO GATEWAY NEEDED

Gateways add an additional point of failure as well as an additional processing cost. With JetPay, communicate directly with the processing center—eliminating the gateway, therefore **eliminating gateway fees.**

"It's no secret that sellers of travel occupy some of the most competitive Internet space. JetPay's solutions have given Expedia an important component needed to help secure our position as the world's leading online travel service. Transactional Technologies' team has been an asset to Expedia as our business changes and we need additional features. They just deliver without question!"

—Tom Sullivan, Director,
E-Commerce Risk, Expedia

JETPAY'S APPLICATION PROGRAMMING INTERFACES

Use JetPay's APIs to quickly integrate your system with JetPay. Our round-the-clock test system allows you to feature test at anytime.

API features include:

- > Sale
- > Auth Only
- > Capture
- > Void
- > Inquire
- > CVV2/CID/CVC2
- > AVS
- > Receiving Payment
- > Verified by Visa
- > MasterCard SPA
- > Multi-currency
- > And many more functions

PRIVATE FIELD REPORTING

Does your company need to capture non-standard data? With JetPay's private reporting fields, JetPay will capture data and allow online report generation on your data. Standard fields include four fields of 64 characters each. You decide the type of information you need; JetPay captures and reports it.

IP INTERFACE

JetPay's complete payment solution offers the fastest Internet processing for e-business. Your business system talks directly to the payment processor using TCP/IP over a private line or the Internet.

XML INTERFACE

The JetPay system is designed using extensible markup language (XML) to handle your high-speed processing needs. The flexibility of XML makes system adjustments easy and immediate to meet your business requirements. The XML-based system allows you to determine exactly the information you want to extract. We create reporting fields and produce the information in easy-to-access online reports.

Because it is XML-based, JetPay provides your business with flexible integration, ease of use, and the ability to adapt to virtually any Web site and application. It requires no special software, setup, or special network connectivity. You can use your favorite programming language or tools to post your transactions. Everything you need to process and manage payment transactions is provided through the convenience of a Web browser.

COMPLIANCE

Is your current processor getting the best compliance on transactions? Let JetPay qualify every transaction at the optimum interchange rate. Even if your transaction is not compliant at settlement time, JetPay will work to clean it up prior to settlement with our Transaction Cleanup utility. This function can be invaluable to fulfillment centers that ship 48 hours or longer after an order is placed.

Our engineering staff understands networking, Windows, Unix, and today's complicated bankcard association rules.

24-HOUR TEST SYSTEM

Use our 24-hour test system to develop new features to your payment processing or to integrate to JetPay. Our test system allows for a complete test facility that authenticates responses, allowing for a complete test cycle.

THE POWER OF JETPAY

JetPay's flexible service can meet your business needs through its innovative services. Recurring payment and transaction recycling features ensure that your company receives its payments without the hassle of extra steps. The JetPay system performs the steps for you automatically.

JetPay harnesses the power of communications and produces results for you—faster processing, key customer information, and secure, flexible service. JetPay with tomorrow's technology delivers services and information to help you generate more revenue and keep your customers satisfied. ■
